

Hello and Welcome,

Thank you for visiting our website. We hope you find the information helpful and we look forward to speaking with you about your company and project needs.

Our principal goals are to produce results and always deliver true value to our clients. This requires leadership & dedication to task in order to ensure mutual success.

- Producing results means creating new, solid ideas which demonstrate best-of-breed characteristics, consistently applying engineering principles, and executing to a plan.
- Delivering true value means to inspire a client with the realization that a unique and tangible asset has been created on their behalf.

Our engineers have many years of experience in the electrical-electronic component design and development field. Most work directly with our customers. This streamlines communications and helps ensure that we remain focused on your goals & objectives. When you “outsource” a project to us, we guarantee that you will have the right staff and expertise to get the job done on time and on budget. Whether you are developing product derivatives or an entirely new product—we have the engineering resources to make your effort a success. Our engineers will help your company during any phase of your project.

*Call us today—we will help you complete your next project...*

Sincerely,

*Michael N. Perugini*

Michael N. Perugini  
President and Chief Technology Officer  
Integrated System Technologies, LLC
